

Introduction to GIS

Computer Science Workshop 2021

Instructor: Gwendolyn Lloyd (lloydg@miamioh.edu)

TA: Kallie Koon (koonkr@miamioh.edu)

Hi all!!

Thank you for signing up for the workshop, and for this course. I'm so excited to spend time playing with GIS data with all of you.

Before we meet, please be sure to download QGIS (see the *QGIS Download Links* document). If you have previous GIS experience, you may have used a similar software, ArcMap. However, QGIS is open source, meaning that you can have access to this software and all its capabilities after the workshop if you are interested in learning more about GIS methods and techniques.

All the course material is in the folder, and we will be going through it together. If you want to work through it ahead of time you are welcome to and then spend independent work time during the workshop delving further into the data and tools. If you choose to do this, please know that there we will work through the provided content together, so there may be some repetition for you.

I am looking forward to 'meeting' all of you soon!

Gwendolyn and Kallie
